

## MODULAR GAS TO LIQUIDS

Xenergi is a Natural-Gas technology company and a member of the Oildata Energy Group, involved in the conversion of Natural Gas into cleaner energy products such as LPG, Propane and mixed alcohols.

We apply innovative energy solutions through an integrated design and technology driven process called ennovention™. Xenergi's modular energy solutions help convert stranded gas from small and remotely located sources into profitable cleaner energy products.

Xenergi provides Dual-fuel Diesel-Gas Systems which modify diesel engines to operate safely on mixtures of Diesel and Gas fuels. Converted engines can operate on only 8% Diesel and 92% Natural Gas (or LPG).

We pioneered an innovative clean energy initiative providing health and economic benefits to rural communities through our LPG Exchange And Power (LEAP) program. LEAP is designed to permanently substitute kerosene and biomass fuels for cooking through the broad distribution of environmentally-friendly LPG produced by our modular gas conversion plants.

## ENERGY CONVERSION TECHNOLOGY

Our other services include;

- Front End Engineering Design (FEED)
- Operations and Maintenance (O&M) of gas plants

Xenergi currently operates in West Africa; with her main field-operations base in Port-Harcourt – Nigeria. Other offices are located at Lagos, Abuja, Onne (Oil and Gas free zone), and Warri, Nigeria. Client support and technology development activities are coordinated from our Houston office.
